EDUCATION

Carleton University September 2021 – April 2026
Bachelor of Engineering (B.Eng.), Computer Systems Engineering Ottawa, ON

- **Bronze Medalist**, 2024 Canadian Engineering Competition, National Programming Category

EXPERIENCE

Shopify September 2026 – Present
Software Engineering Intern, Card Payment Methods

- Enabled Google Pay for **over 10,000 Shopify shops in France** through **Ruby on Rails services and Stripe integrations**, implementing payment capability configuration, merchant notifications, and opt-in handling
- Built staged activation tooling with dry-run previews, CSV targeting, throttling, and rerun safeguards; used **SQL/BigQuery and Observe** to investigate activation gaps, identify missed accounts, and monitor payment failures
- Updated payment-provider selection and added **backward-compatible event instrumentation** for ML routing holdouts, giving Data Science an identifiable control group for authorization-rate analysis

Lumentum January 2025 – August 2025
System Software & Design Verification Intern *Ottawa, ON*

- Built a **TypeScript end-to-end test suite** using Selenium/Tauri and GitHub Actions, reducing regression testing from several hours to **under 30 minutes per release**
- Built a **Python CLI** to parse device logs and generate PPTX/PDF verification reports, replacing manual report assembly for **12 engineers across 3 teams**
- Automated firmware upgrades and connectivity checks for **5+ networked devices** using Bash and gNOI/gNOIC, saving an estimated **3–5 engineer-hours per week**

Maintenance Drone Co. May 2024 – December 2024
Software Engineering Intern *Ottawa, ON*

- Reduced point-cloud processing time by an estimated **15–20%** using **Python and NumPy** downsampling and noise filtering for drone surveys
- Built a **Python route-planning tool** using Shapely and Matplotlib to generate waypoint missions from KML/XML files, replacing **3+ hours of manual route digitization per survey**

Roof Maintenance Solutions May 2022 – December 2023
Software Engineering Intern *Ottawa, ON*

- Automated XML annotation transfers across **100+ survey files totaling over 1 GB** using **Python**, reducing batch report generation from approximately **10 minutes to under 1 minute**

PROJECTS

CU-Bytes *github.com/GAchuzia/cu-bytes*
Engineering Capstone | PyTorch, Flask, React Native/Expo, SQLite, Azure

- Trained and deployed a **ResNet50 image classifier** using PyTorch, achieving **87% accuracy across 176 food categories** through transfer learning and data augmentation
- Built a training framework supporting multiple model architectures, checkpoint recovery, and accuracy regression tests, alongside a **cross-platform React Native application**

SKILLS

Languages: Ruby, Python, TypeScript/JavaScript, SQL, C/C++, Bash
Frameworks & Libraries: Ruby on Rails, React, React Native, Flask, PyTorch, NumPy
Tooling & Infrastructure: Git, GitHub Actions, Docker, Linux, BigQuery, Selenium
